Testimonial for Lee Wei Kiat

Dear Sir/Mdm,

I am pleased to provide this testimonial for **Lee Wei Kiat**, who completed his NUS capstone project in collaboration with the National Cancer Centre Singapore from 26 January 2026 to 15 April 2026. Throughout the project, Wei Kiat consistently demonstrated strong commitment, technical competence and a thoughtful, structured approach in addressing a complex real-world analytical problem. He contributed meaningfully at every stage of the project, from requirements gathering and design to prototype development and final validation and carried himself with professionalism and sincerity throughout.

The project was a promising and well-executed piece of work that applied a multi-agent system to support complex analytical decision-making. Through this work, Wei Kiat helped to develop an orchestrator that brought together different expert perspectives, including those of a data scientist, statistician and explainable AI specialist, to evaluate alternative methodologies and improve transparency in the reasoning process. What stood out to me was not only the innovation behind the project, but also its practical relevance and strong potential for broader application in supporting thoughtful and well-informed analytical work.

I have every confidence in Wei Kiat's abilities and future potential. He is a dependable, thoughtful and mature individual who approaches his work with professionalism and good judgement. He worked well with others, integrated seamlessly into the team, and was a pleasure to work with throughout the project. I am confident that he will continue to do well and make meaningful contributions in both academic and professional settings.
